INTRODUCTION
Thank you for selecting and purchasing the Cardinal Model 200 Weight Indicator. The Model
200 was built with quality and reliability at our factory in Webb City, Missouri and incorporates
the latest in digital technology and innovative features for the weighing industry. Configuration
and upgrades can easily be performed in the field, while still maintaining the rigid control the
most demanding installations require. This flexibility insures the Model 200 will be able to
meet your weight indicating needs for years to come.

The purpose of this manual is to provide you with a guide through installation, setup and
operation of your new Model 200 Weight Indicator. Please read it thoroughly before
attempting to install your weight transmitter and keep it handy for future reference.

COPYRIGHT
All rights reserved. Reproduction or use, without expressed written permission, of editorial or
pictorial content, in any manner, is prohibited. No patent liability is assumed with respect to
the use of the information contained herein.

DISCLAIMER
While every precaution has been taken in the preparation of this manual, the Seller assumes
no responsibility for errors or omissions. Neither is any liability assumed for damages resulting
from use of the information contained herein. All instructions and diagrams have been
checked for accuracy and ease of application; however, success and safety in working with
tools depend to a great extent upon the individual accuracy, skill and caution. For this reason
the Seller is not able to guarantee the result of any procedure contained herein. Nor can they
assume responsibility for any damage to property or injury to persons occasioned from the
procedures. Persons engaging the procedures do so entirely at their own risk.

PRECAUTIONS
Before using this indicator, read this manual and pay special attention to all
"NOTIFICATION" symbols:

IMPORTANT  ELECTRICAL  STATIC
WARNING     SENSITIVE

RETAIN THIS INFORMATION FOR FUTURE USE
FCC COMPLIANCE STATEMENT

This equipment generates uses and can radiate radio frequency and if not installed and used in accordance with the instruction manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area may cause interference in which case the user will be responsible to take whatever measures necessary to correct the interference.

PROPER DISPOSAL

When this device reaches the end of its useful life, it must be properly disposed of. It must not be disposed of as unsorted municipal waste. Within the European Union, this device should be returned to the distributor from where it was purchased for proper disposal. This is in accordance with EU Directive 2002/96/EC. Within North America, the device should be disposed of in accordance with the local laws regarding the disposal of waste electrical and electronic equipment.

It is everyone’s responsibility to help maintain the environment and to reduce the effects of hazardous substances contained in electrical and electronic equipment on human health. Please do your part by making certain that this device is properly disposed of. The symbol shown to the right indicates that this device must not be disposed of in unsorted municipal waste programs.

SPECIFICATIONS

Power Requirements: 90 to 264 VAC 50/60 Hz 15 VDC 1A plug-in UL/CSA listed AC power adapter (Cardinal part number 6800-1035).

Enclosure Type: Aluminum, NEMA 12/IP52

Enclosure Size: 5.32" W x 2.62" H x 9.13" D (135 mm W x 66.6 mm H x 232 mm D)

Weight: 8.2lbs

Operating Environment: Temperature: 14 to 104 ºF (-10 to +40 ºC)
Humidity: 90% non-condensing (maximum)

Display: 6-digit, 0.6" high, 7-segment LED

Transducer Excitation: 12 VDC

Signal Input Range: 1.0 mV min. to 40 mV max. (with dead load boost)

Number of Load Cells: 8 each, 350 OHM minimum resistance

Load Cell Cable Length: 1500 feet maximum. Consult factory for other requirements
30 feet maximum without sense lines

Division Value: 1, 2, or 5 x 10, 1, 0.1, 0.01, 0.001 commercial
0 to 99, non-commercial

Sensitivity:
- NON-COMMERCIAL 0.15 uV/e
- NTEP 0.3uV/e (Class III/IIIL)
- CANADA 0.3uV/e (Class III/IIIHD)
- OIML 0.7 uV/e (Class III)

Scale Divisions:
- NON-COMMERCIAL 100 to 240,000
- NTEP 100 to 10,000 (Class III/IIIL)
- CANADA 100 to 10,000 (Class III/IIIHD)
- OIML 100 to 10,000 (Class III)

Internal Resolution: 1 part in 16,777,216

Tare Capacity: Scale Capacity

Sample Rate: 1 to 100 samples per second, selectable

Auto Zero Range: 0.5 or 1 through 9 divisions

Weighing Units: Tons, Pounds, Pounds-Ounces, Ounces,
Metric Tons, Kilograms, Grams

Keypad: Color coded Membrane type - 7 keys

Standard I/O: (1) bi-directional RS232 (20mA)
(1) output only RS232 (20mA)
SPECIFICATIONS, CONT.

Standard Features:
- Push button tare function
- Gross, Tare, Net conversion
- Selectable key lockout
- Hi-Resolution mode
- StableSENSE®\(^1\) adjustable digital filtering
- Gross and Net accumulators
- Dual serial ports
- Remote input lines for Zero, Tare, Gross and Print (1000 feet maximum)
- Programmable print format using Visual Print or nControl (2 Visual Tickets available)
- SMA level 2 compliant serial communications
  (For more information see http://www.scalemanufacturers.org)
- Field re-programmable via PC interconnection
- Test feature (performs display and internal tests)
- Auto Shutoff and Sleep modes

Optional Features:
Analog Output*, Allen-Bradley Interface*, 10/100 mbps Ethernet Adapter*, Additional Serial Port*, External Relay Box* and Special Filtering

*This feature requires additional hardware and includes additional documentation.

Certifications:
This equipment is certified to comply with the requirements for a Class III/IIIL device by the
- National Conference on Weights and Measurements (Certificate No. 01-011)
- Measurement Canada (Approval No. AM-5397)
- And for a Class III device by OIML R-76 (Certificate No. DK 0199.47).

\(^1\) StableSENSE® is a digital filter utilizing proprietary software algorithms to remove or greatly reduce changes in the weight display resulting from movement on the scale platform. StableSENSE® can be used to lessen the effects of movement on the scale or it can be used to lessen the effects of wind and vibration. Any application affected by vibration or movement on the scale platform can benefit using StableSENSE®.
EUROPEAN DECLARATION OF CONFORMITY

Manufacturer:  Cardinal Scale Manufacturing Company  
PO Box 151  
203 East Daugherty  
Webb City, Missouri  64870  USA  
Telephone No.   (417) 673-4631  
Fax No.              (417) 673-5001

Product:   Non-automatic Weight Indicating Instrument  
Model Numbers 200, 205, 210, 210FE, 215, 220 and 225  
Serial Number  EXXXYY-ZZZ  
where  XXX = day of year  
YY = last two digits of year  
ZZZ = sequential number

The undersigned hereby declares, on behalf of Cardinal Scale Manufacturing Company of Webb City, Missouri, that the above-referenced product, to which this declaration relates, is in conformity with the provisions of:

- EU Type Approval Certificate Number DK 0199.159  
- Report No.  DANAK-1910304

Of the Laws of Member States relating to non-automatic weighing  
Systems as amended by:  

- European Standard EN50082: 1995 for radiated emissions and  
European Standard EN50082-2: 1995 Class B for EMC immunity.

The Technical Construction File required by this Directive is maintained at the corporate headquarters of Cardinal Scale Manufacturing Company, 203 East Daugherty, Webb City, Missouri.

Quality Assurance Administrator
PRECAUTIONS

Static Electricity

CAUTION! This device contains static sensitive circuit cards and components. Improper handling of these devices or printed circuit cards can result in damage to or destruction of the component or card. Such actual and/or consequential damage IS NOT covered under warranty and is the responsibility of the device owner. Electronic components must be handled only by qualified electronic technicians who follow the guidelines listed below.

WARNING! ALWAYS use a properly grounded wrist strap when handling, removing or installing electronic circuit cards or components. Make certain that the wrist strap ground lead is securely attached to an adequate ground. If you are uncertain of the quality of the ground, you should consult a licensed electrician.

ALWAYS handle printed circuit card assemblies by the outermost edges. NEVER touch the components, component leads or connectors. ALWAYS observe warning labels on static protective bags and packaging and never remove the card or component from the packaging until ready for use. ALWAYS store and transport electronic printed circuit cards and components in anti-static protective bags or packaging.
SITE PREPARATION REQUIREMENTS

The Model 200 Weight Indicator is a precision weight-measuring instrument. As with any precision instrument, it requires an acceptable environment to operate at peak performance and reliability. This section is provided to assist you in obtaining such an environment.

Environmental

The Model 200 Weight Indicator meets or exceeds all certification requirements within a temperature range of 14 to 104 °F (-10 to +40 °C).

In order to keep cooling requirements to a minimum, the indicator should be placed out of direct sunlight and to provide adequate air circulation, keep the area around the indicator clear.

Make certain the indicator is not directly in front of a heating or cooling vent. Such a location will subject the indicator to sudden temperature changes, which may result in unstable weight readings.

Insure that the indicator has good, clean AC power and is properly grounded.

In areas subject to lightning strikes, additional protection to minimize lightning damage, such as surge suppressors, should be installed.

Electrical Power

The 200 indicator has been designed to operate from 90 to 264 VAC 50/60 Hz 15 VDC 1A plug-in UL/CSA listed AC power adapter (Cardinal part number 6800-1035).

- The socket-outlet supplying power to the indicator should be on a separate circuit from the distribution panel and dedicated to the exclusive use of the indicator.
- The socket-outlet shall be installed near the equipment and shall be easily accessible.
- The wiring should conform to national and local electrical codes and ordinances and should be approved by the local inspector to assure compliance.
- On installations requiring 230 VAC power, it is the responsibility of the customer to have a qualified electrician install the proper power cord plug that conforms to national electrical codes and local codes and ordinances.
SITE PREPARATION REQUIREMENTS, CONT.

Electrical Noise Interference
To prevent electrical noise interference, make certain all other wall outlets for use with air conditioning and heating equipment, lighting or other equipment with heavily inductive loads, such as welders, motors and solenoids are on circuits separate from the indicator. Many of these disturbances originate within the building itself and can seriously affect the operation of the indicator. These sources of disturbances must be identified and steps must be taken to prevent possible adverse effects on the indicator. Examples of available alternatives include isolation transformers, power regulators, uninterruptible power supplies, or simple line filters.

Transient Suppression
The following recommendations will help to reduce transients:
- Always use shielded cables to connect signal wires to the weight indicator.
- Do not run load cell or signal cables from the weight indicator along side or parallel to wiring carrying AC power. If unavoidable, position the load cell and signal cables a minimum of 24" away from all AC wiring.
- Always use arc suppressors across all AC power relay contacts (see recommendations at http://www.paktron.com/pdf/Quencharch_QRL.pdf).
- Use zero voltage switching relays, optically isolated if possible.

RFI Immunity
The operation of sensitive electronic equipment can be adversely affected by RF (Radio Frequency) radio transmissions. Digital weight indicators are one such type of equipment. Radio transmissions come from things like hand-held radio transmitters and cell phones. One symptom of RFI (Radio Frequency Interference) in a digital weight indicator is weight indication instability during a radio transmission.

Cardinal digital weight indicators are designed with special grounding and RFI shielding to achieve a high degree of immunity to common RFI. To maximize the digital weight indicator’s immunity to radio transmissions, follow these guidelines:

1. ALWAYS use shielded cable for all I/O (Input/Output) connections to the digital weight indicator.
2. NEVER operate any radio transmitter within 2 meters (~6ft.) of the weight indicator.
3. NEVER connect un-terminated serial, digital, or analog I/O cables to the internal printed circuit boards of the digital weight indicator.
4. KEEP the intended external I/O device connected to I/O cables interring the digital weight indicator.
5. ALWAYS connect the shield of the shielded cable to the indicator back panel gland connector or other closest ground terminal inside the indicator.
6. ALWAYS connect the shield of the shielded I/O cable at the indicator end only. Leave the shield unconnected at the I/O device.
INSTALLATION

Unpacking
Carefully remove the indicator from the shipping carton and inspect it for any evidence of damage that may have taken place during shipment. Keep the carton and packing material for return shipment if it should become necessary. The purchaser is responsible for filing all claims for any damages or loss incurred during transit.

Mounting
1. The Model 200 Weight Indicator is housed in a NEMA 12/IP52 enclosure that is normally mounted to a panel or wall. Make certain the mounting surface is strong enough to support the indicator. The mounting location should be where the display is easily viewed while being close enough to provide the operator easy access to the keypad.

2. Carefully lay out the mounting hole in the panel or wall, and then cut out an opening, referring to Figure No. 1 for the cutout dimensions.

3. Remove the 2 screws securing the mounting clamps to the enclosure. See Figure No. 2.

4. Slide both mounting clamps toward the rear of the indicator and remove. See Figure No. 3.

5. Insert the indicator through the cutout in the panel until the front bezel is resting against the panel. Make sure the indicator is facing in the correct upright position.

6. Place both mounting clamps in the groove on the side of the enclosure and slide them forward to rest against the panel. NOTE: The mounting clamps are identical and have the same notch on both ends. They can be used on either side with either end against the panel.

7. Install the 2 screws removed in step 2 and finger tighten.

8. While supporting the weight of the indicator (to insure the bezel is flush against the panel), tighten the 2 screws to secure the indicator to the panel. See Figure No. 4.
WARNING! Disconnect any external load cell power supply before connecting load cells to the indicator. Failure to do so will result in permanent damage to the indicator.

1. Remove the 2 screws securing the calibration switch access cover on the rear panel and remove the cover to expose the load cell connector. See Figure No. 5.

2. The LOAD CELL wires are to be connected to the P1 terminal block on the rear panel of the indicator. Refer to Figure No. 6 for the location of P1.

3. Remove 2" of the outer insulation jacket then remove 1/4" of insulation from each of the 4 wires and shield (without sense leads) or 6 wires and shield with sense leads.

4. Connect each of the wires to terminal block P1 referring to the labels on the rear panel and the P1 detail view for terminal connections.

5. Loosen the screws in the terminal block, then slip the wire into the terminal opening and tighten the screw to lock the wire in place. Repeat the procedure until all wires are in place.

6. Replace the calibration switch access cover on the rear panel and secure using the 2 screws removed in step 1.

NOTE: If the sense leads are NOT used, you must install plug-in jumpers at J4 and J5 on the main PC board. See Figure No. 7 for location of the jumpers. These jumpers attach the sense leads to the excitation leads. If sense leads ARE used (as in motor truck scales), these plug-in jumpers should be positioned on one plug-in pin only or removed and stored for later use.

INSTALLATION, CONT.

Load Cell Connections With Over 30 Feet Of Cable
For installations with over 30 feet of cable between the indicator and the load cells, sense wires should be used. The sense wires must be connected between the +SENS, -SENS terminals on the indicator and the +EXCITATION, -EXCITATION wires of the load cells or the +SENS, -SENS terminals of the load cell trim board or the section seal trim board. For the indicator to use the sense wires, the +SENS jumper J4 and the -SENS jumper J5 must be open (see Figure No. 9).

Serial I/O Cable Installation
The 200 indicator may be connected to a printer to record weight and associated data or it may be connected to a remote display or even to a computer for transmission of weight data. The weight data may be transmitted on demand (pressing the PRINT key or on receipt of a command from the computer). Refer to the Setup, SIO Serial I/O section of this manual.

1. The SERIAL I/O cable is connected to the P3 terminal block on the rear panel of the indicator. Refer to Figure No. 7 for the location of P3.
2. Remove 2" of the outer insulation jacket then remove 1/4" of insulation from each of the wires.
3. Connect each of the wires to terminal block P3 referring to the labels on the rear panel and the P3 detail view for terminal connections for terminal connections.
4. Loosen the screws in the terminal block, then slip the wire into the terminal opening and tighten the screw to lock the wire in place. Repeat the procedure until all wires are in place.

P3 Detail View
INSTALLATION, CONT.

Optically Isolated Remote Inputs
Included with the I/O are 4 programmable inputs that may be used to remotely (up to 100 feet) initiate various functions within the indicator. These inputs are accessed via a terminal block (P2) on the rear panel of the indicator. See Figure No. 8.

1. The REMOTE INPUT wires are connected to the P2 terminal block on the rear panel of the indicator. Refer to Figure No. 8 for the location of P2.

2. Remove 2" of the outer insulation jacket then remove 1/4" of insulation from each wire.

3. Connect each of the wires to terminal block P2 referring to the labels on the rear panel and the P2 detail view for terminal connections.

4. Loosen the screws in the terminal block, then slip the wire into the terminal opening and tighten the screw to lock the wire in place. Repeat the procedure until all wires are in place.

   NOTE: Remember that the input must be momentarily connected to one of the GND terminals on P3 to initiate the function.

Optional Analog Output (200-A Only)
The optional Analog Output Option DAC (Digital to Analog Converter) board consists of both a 0 to 10 volt and 4 to 20 mA analog output. Refer to the 2XX-DAC Digital to analog Converter Analog Output manual (8200-M350-O1) for installation and setup of the DAC board.

1. The ANALOG OUTPUT wires are connected to the P2 terminal block on the rear panel of the indicator. Refer to Figure No. 8 for the location of P2.

2. Remove 2" of the outer insulation jacket then remove 1/4" of insulation from each wire.

3. Connect each of the wires to terminal block P2 referring to the labels on the rear panel and the P2 detail view for terminal connections.

4. Loosen the screws in the terminal block, then slip the wire into the terminal opening and tighten the screw to lock the wire in place. Repeat the procedure until all wires are in place.

INSTALLATION, CONT.

Main PCB Jumpers

**J1 - AUTO-ON JUMPER**
The AUTO-ON jumper J1, when connected, will cause the indicator to power on automatically whenever power is applied to the power input connector. If power is lost momentarily and then reapplied, the indicator will turn on without pressing the ON key.

**J2 - DEAD LOAD BOOST JUMPER**
For very low dead loads (less than 10% of the combined load cell capacity) connect the dead load boost jumper J2 on the printed circuit board.

**J3 - 8V EXCITATION JUMPER**
The 8V EXCITATION jumper J3, when connected, sets the load cell excitation voltage to 8V for operation with a 12 VDC battery. To operate from a 12 VDC battery, the load cell excitation voltage MUST be set to 8 VDC (J3 closed). Battery operation with the load cell excitation voltage set to 12V will result in an unstable weight display.

**J4 AND J5 - SENSE JUMPERS**
If the sense leads are NOT used, you must install plug-in jumpers at J4 and J5 adjacent to the terminal block. These jumpers attach the sense leads to the excitation leads. If sense leads ARE used (as in motor truck scales), these plug-in jumpers should be positioned on one plug-in pin only or removed and stored for later use.
KEYPAD FUNCTIONS

The Model 200 Weight Indicator is equipped with a 7-key keypad. The keypad is used to enter commands and data into the indicator. This section describes each key along with its normal function. It is helpful to refer to the actual indicator while reading this section.

![Keypad Diagram]

Figure No. 10

DO NOT operate the keypad with pointed objects (pencils, pens, etc). Damage to keypad resulting from this practice is NOT covered under warranty.

**ON/OFF KEY**

This key performs two functions. Pressing it when the indicator is off will apply power to the indicator. If the indicator is already on, pressing this key will turn the indicator off.

**ZERO KEY/REVIEW**

Pressing this key will cause an immediate zeroing of the weight display up to the selected limit of 4% or 100% of the scale's capacity. This selection is made during the setup and calibration of the indicator. Note the indicator will not respond to this command unless the weight display is stable.

Pressing the ASTERISK key before the ZERO KEY/REVIEW key will enter the Review mode of Setup and Calibration. Refer to the Setup Review section of this manual.

**TARE/ENTER**

Pressing the TARE key alone will store the current gross weight as the new tare weight and the weight display will change to the net weight display mode (Net annunciator will turn on).

Pressing the ASTERISK key before the TARE/ENTER key serves two purposes. First, when reviewing setup parameters, pressing the TARE/ENTER key will display the current setting of the parameter. Second, the TARE/ENTER key is used to signal completion of the entry of data and causes the indicator to process the data entered.

**NET/GROSS KEY**

This key is used to toggle between the Net and Gross weight modes. The selected mode is indicated by turning on the appropriate annunciator on the display. Note that if no valid tare weight has been entered, pressing this key will cause a momentary "not Ar E" display error and the indicator will remain in the Gross weight mode.
KEYPAD FUNCTIONS, CONT.

UNIT / LEFT ARROW KEY/TEST
This key is used for several functions. In normal operation, this key is used to select the units in which the weight is to be displayed. The available units of measure ("unit1" and "unit2") are selected in setup. The available units include tons, pounds only, pound-ounces, ounces only, Tonnes (metric tons), kilograms, and grams. Note that not all combinations are supported.

During setup, this key is used to advance the cursor left to the next position when inputting setup parameters.

Pressing the ASTERISK key before the UNITS/LEFT ARROW KEY/TEST key will enter the Test mode. Refer to the description of the ASTERISK key below for details.

ASTERISK / UP ARROW KEY
This key is used for several functions. During setup, when a setup parameter (not a parameter value) is displayed, pressing this key will "backup" to the previous prompt. Also during setup, when a parameter value is displayed, pressing this key will "toggle" between the different available values for the setup parameter. In normal operation, this key is used in conjunction with the other keys on the keypad to access additional indicator features. These features and their associated key combinations are as follows:

ASTERISK, ZERO KEY
This combination will enter the Review mode of Setup and Calibration. Refer to Setup Review section of this manual for details.

ASTERISK, TARE KEY
This combination will display the current tare weight for three (3) seconds.

ASTERISK, NET/GROSS KEY
This combination will display the Net accumulator.

ASTERISK, NET/GROSS KEY, PRINT KEY
This combination will print the Net accumulator.

ASTERISK, NET/GROSS KEY, ZERO KEY
This combination will zero (clear) the Net accumulator.

ASTERISK, NET/GROSS KEY, NET/GROSS KEY
This combination will display the Gross accumulator.

ASTERISK, NET/GROSS KEY, NET/GROSS KEY, PRINT KEY
This combination will print the Gross accumulator.

ASTERISK, NET/GROSS KEY, NET/GROSS KEY, ZERO KEY
This combination will zero (clear) the Gross accumulator.

ASTERISK, UNITS KEY
This combination will enter the Test mode. The Test mode is used to conduct a test of all display elements. The test consists of 5 cycles, each lasting about one second:

1. All horizontal segments will turn on (no annunciators).
2. All vertical segments and decimal points will turn on (no annunciators).
3. All annunciators will turn on.
4. All display elements off.
5. The model number (200) and the software version X.X.
6. The calibration numbers (C1 to C4).
KEYPAD FUNCTIONS, CONT.

ASTERISK, PRINT KEY
This combination is used to change the selected print ticket format. Pressing the ASTERISK then the PRINT key will display a prompt “Prt=”. Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, press the ASTERISK/UP ARROW key to “toggle” between the different available values, then press the TARE/ENTER key to save it. Allowable values are:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>print tab settings</td>
</tr>
<tr>
<td>1</td>
<td>visual ticket format 1</td>
</tr>
<tr>
<td>2</td>
<td>visual ticket format 2</td>
</tr>
</tbody>
</table>

NOTE: When a print format is selected, it will remain active until changed by the operator.

PRINT KEY
Pressing this key will add the displayed gross or net weight to the associated accumulator and initiate the transmission of weight and other data depending on the Print Tab Settings (see example) via the selected printer output port (see Port= under Print menu) unless the continuous data feature of this port was enabled during setup and calibration. Note that the indicator will not respond to this command unless the weight display is stable. If displaying gross weight, the only weight printed is gross weight. If displaying net weight, the gross, tare, and net weights will print.

The 200 includes support for visual tickets. Visual tickets are designed by the PC based programs Visual Print or n Control, then downloaded to the indicator. The 200 allows two programmable formats in addition to the standard print tab settings format.

Print formats are selected by using the ASTERISK and PRINT keys in combination (refer to the previous section for details). **NOTE:** When the PRINT key is pressed the indicator looks for the selected format. If no visual ticket is found it reverts to the print tab settings.

TICKET EXAMPLE
ANNUNCIATORS

Annunciators are turned on to indicate that the display is in the mode corresponding to the annunciator label or that the status indicated by the label is active. The annunciators flash on and off to indicate that the indicator is waiting for an input from the keypad for the mode indicated by the flashing annunciator. Refer to Figure No. 10 for location of the annunciators.

ZERO
This annunciator is turned on to indicate that the weight displayed is within +/- 1/4 division of the center of zero.

▶️ (STABLE)
This annunciator is turned on when the weight display is stable. When off, it means that the change in successive weight samples is greater than the motion limits selected during setup.

NET
This annunciator is turned on to show that the displayed weight is the net weight (gross weight less tare weight).

GROSS
This annunciator is turned on to show that gross weight is displayed. Gross weight will be displayed when no tare weight is stored.

TARE
This annunciator is turned on to show that the displayed weight is the tare weight.

T
This annunciator is located to the right of the weight display and is turned on to show that the displayed weight unit is tons.

g
This annunciator is located to the right of the weight display and is used to indicate that the displayed unit of weight measurement is grams.

lb
This annunciator is located to the left of the weight display and is turned on to show that the displayed weight unit is pounds.

oz
This annunciator is located to the right of the weight display and is turned on to show that the displayed weight unit is ounces.

kg
This annunciator is located to the left of the weight display and is used to indicate that the displayed unit of weight measurement is kilograms.

t
This annunciator is located to the right of the weight display and is used to indicate that the displayed unit of weight measurement is Tonnes (metric tons).
SETUP AND CALIBRATION

Your Model 200 Weight Indicator has been thoroughly tested and calibrated before being shipped to you. If you received the indicator attached to a scale, calibration is not necessary. If the indicator is being connected to a scale for the first time or recalibration is necessary for other reasons, proceed as indicated.

The calibration switch is located on the enclosure rear panel. You may gain access to this switch by removing the 2 screws securing the calibration switch access cover on the rear panel. Refer to Figure No. 11.

During setup and calibration it will be necessary to enter operational parameters using the indicator keypad.

- Pressing the TARE/ENTER key will cause the data entered or displayed to be retained and the indicator to advance to the next prompt.
- The functions of numeric keys are replaced by using the UNITS/LEFT ARROW and the ASTERISK/UP ARROW keys.
- The cursor location is identified by the blinking character and can be advanced to the next position (left) by pressing the UNITS/LEFT ARROW key.
- Pressing the ASTERISK/UP ARROW key will change the blinking character to the next value. Continue to press this key to toggle between the available values for the setup parameter.
- Pressing the ASTERISK/UP ARROW key when a setup parameter (not a parameter value) is displayed, will "backup" to the previous prompt.

DO NOT operate the keypad with pointed objects (pencils, pens, etc). Damage to keypad resulting from this practice is NOT covered under warranty.

Enter Setup Mode

To enter the setup mode, with the indicator ON, insert a small screwdriver or other tool through the calibration switch access hole on the rear panel. Press and release the calibration switch. The menu SETUP will be displayed. Continue to press and release the switch to rotate through the beginning point for entering the setup mode.

- **SETUP** Setup Mode (starts at USA prompt)
- **A-d** Analog to Digital Filtering (starts at dFL t= prompt)
- **CRL** Calibration (starts at CRL t prompt)
- **SSk** Setup Guardian Scale (starts at tLoU prompt)
- **SLo** Serial Input/Output (starts at SLo prompt)
- **Pr inP** Print Tab Settings (starts at PrP t prompt)
- **F SPR** Fine Span Adjustment
- **Hi rES** Display high-resolution weight mode
- **LoCoUt** Key lock out function
- **oPt ion** Option Card Configuration (only displayed when option card is installed)

If you press the TARE/ENTER key at the SETUP prompt, you may proceed through to the next section (up to and including F SPR ) by pressing the TARE/ENTER key.
SETUP AND CALIBRATION, CONT.

IMPORTANT! Setup may be interrupted at any time. ALL data previously entered and finalized with the TARE/ENTER key will be retained in the non-volatile memory.

Pressing the calibration switch at any prompt will return you to the SETUP menu. To exit setup, press the ASTERISK/UP ARROW key with any of the above menu selections displayed or cycle power at any time (press the ON/OFF key twice).

NOTE: With the exception of the SETUP prompt, the prompts displayed for each section are different if you push the calibration switch instead of pressing the TARE/ENTER key to proceed through the section.

For example, if you press the calibration switch with the SETUP displayed, the next prompt displayed will be R-d.

If you step through the setup prompts by pressing the TARE/ENTER key, the next prompt displayed will be R- dP.

In addition, at a prompt with the P displayed, you must press the TARE/ENTER key, the 1/YES key then the TARE/ENTER key again to proceed with that section.

To skip the section and advance you to the next menu selection, press the TARE/ENTER key twice.

SETUP

USA= (Domestic or International)

With SETUP displayed, press the TARE/ENTER key. The display will change to USA= . Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Interval Setting

Press the TARE/ENTER key to show the current value.

If LFt = 1 (Legal For Trade = YES), use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 1, 2, 5, 10, 20 or 50.

If LFt = 0 (Legal For Trade = NO), use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 1 through 99.

In either case, if the setting displayed is acceptable, press the TARE/ENTER key again it.

dPP = (Decimal Point Setting)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 0, 1, 2 or 3.

<table>
<thead>
<tr>

</tbody>
</table>

CAP = (Capacity)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 1 through 999,999. **NOTE:** Capacity cannot exceed 999,999.

Unit 2 = (Weighing Unit 2)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are:

<table>
<thead>
<tr>
<th>Value</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>none</td>
</tr>
<tr>
<td>1</td>
<td>tn (tons)</td>
</tr>
<tr>
<td>2</td>
<td>g (grams)</td>
</tr>

<td>tonnes (metric tons)</td>
</tr>
<tr>
<td>7</td>
<td>lb/oz (pounds/ounces)</td>
</tr>
</tbody>
</table>

**NOTE:** The selection for Unit 2 cannot be the same as Unit 1. In addition, dependent upon the selection for Unit 1 and the interval and decimal point settings, not all unit combinations are available.
**SETUP AND CALIBRATION, CONT.**

\( \text{\textit{trZ}} \) (Zero Tracking Range)
Press the TARE/ENTER key to show the current value assigned to the Automatic Zero Tracking Range. This is the value in scale divisions that will be automatically zeroed off. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \textbf{ASTERISK/UP ARROW} key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 0 (disables Zero Tracking), .5, or 1 through 9.

\( \text{\textit{trL}} = \) (4% Zero Range)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \textbf{ASTERISK/UP ARROW} key to toggle to a new setting and then press the TARE/ENTER key to save it.

\begin{array}{ll}
\text{\textit{trL} = 1 (Yes)} & \text{\textit{trL} = 0 (No)} \\
4\% \text{ of scale capacity} & \text{Full capacity (no limit)}
\end{array}

\( \text{\textit{PUO}} = \) (Power-Up Zero Feature)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \textbf{ASTERISK/UP ARROW} key to toggle to a new setting and then press the TARE/ENTER key to save it.

\begin{array}{ll}
\text{\textit{PUO} = 1 (Yes)} & \text{\textit{PUO} = 0 (No)} \\
\text{Automatic Re-Zero on Power-Up} & \text{No Re-Zero on Power-Up}
\end{array}

\( \text{\textit{SLEEP}} = \) (Sleep Mode Feature)
The Sleep Mode feature conserves battery power when the indicator remains unused for a selected period of time. With the feature enabled, the load cell excitation will be reduced and the display will be blank.

Press the TARE/ENTER key to show the current status of this feature. If a number other than 0 is shown, this feature is selected and the number shown corresponds to the number of minutes of a stable zero weight reading before the indicator enters the sleep mode.

If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \textbf{ASTERISK/UP ARROW} key to toggle to a new setting and then press the TARE/ENTER key to store the new setting. Allowable values are: 0 through 10. Note that selecting 0 disables this feature.

\( \text{\textit{OFF}} = \) (Auto Shutoff)
The Automatic Shutoff feature will automatically turn the indicator off (when it is not in use) after a predetermined period of inactivity to prolong battery life. To turn the indicator back on you must press the ON/OFF key.

Press the TARE/ENTER key to show the current status for this feature. A number other than 0 indicates that the auto shutoff feature is enabled and the displayed number corresponds to the number of minutes of stable weight displayed before the indicator is turned off automatically.

If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \textbf{ASTERISK/UP ARROW} key to toggle to a new setting (0 to 10) and then press the TARE/ENTER key to store the new setting. Allowable values are: 0 through 10. Note that selecting 0 disables this feature.
SETUP AND CALIBRATION, CONT.

$CLtAr$ (Clear Tare)

The Clear Tare feature allows the indicator to clear the Stored Tare weight when the Net weight goes below a value greater than 1/2 the stored tare weight or goes below zero (a negative net weight after display of a positive net weight). With this feature enabled, the operator must re-set the tare after completion of a transaction when the load (container plus item) is removed from the scale.

Press the **TARE/ENTER** key to show the current value. If the setting displayed is acceptable, press the **TARE/ENTER** key again to save it. Otherwise, use the **ASTERISK/UP ARROW** key to toggle to a new setting and then press the **TARE/ENTER** key to save it.

<table>
<thead>
<tr>
<th>$CLtAr$</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 (Yes)</td>
<td>Automatically clears Stored Tare when Net weight goes below zero</td>
</tr>
<tr>
<td>0 (No)</td>
<td>Stored Tare is not cleared when Net weight goes below zero</td>
</tr>
</tbody>
</table>
SETUP AND CALIBRATION, CONT.

A - d (A - d?) - Analog to Digital Filtering

SERSC - (REMOTE INDICATOR SETUP)*
If the indicator is to function as a remote indicator, press the ASTERISK/UP ARROW key to select YES at the SERSC prompt. If not then press the TARE/ENTER key at the prompt.

IMPORTANT! If the 200 indicator is to be used as the LOCAL and as the REMOTE, then both indicators MUST have Rev 2.6.3 or greater software installed.

If a combination of a 200 and a 225 indicator are to be used in a LOCAL/REMOTE configuration, then the remote 200 indicator MUST have Rev 2.6.1 or greater software installed, and the 225 indicator MUST have Rev 1.0.K or greater software installed.

LrP - (Local/Remote Port)
NOTE: This will only be displayed if SERSC was set to YES
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 1 for port 1 or 3 for the optional 2xx-RS232 card (if installed).

* Refer to the LOCAL/REMOTE SETUP section of this manual for more information and the interconnect wiring diagram.

DFlt - (Digital Filtering)
With A - d (A - d?) displayed, press the TARE/ENTER key. The display will change to DFlt=. Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 0, 1, 2 or 3. Note, that if you select 3 (Custom Filtering) two additional prompts will be displayed.

DFlt:

0 Disabled – NO Filtering
1 MINIMAL FILTERING (sample rate = 2)
2 MODERATE FILTERING (sample rate = 1)
3 CUSTOM FILTERING

NOTE: The prompts, F - (Filter Level), h - (High Frequency Filter Value) and b - (Break Range) will only be displayed if you selected 3 (Custom Filtering) for the DFlt - (Digital Filtering) prompt.

F - (Filter Level)
Press the TARE/ENTER key to show the current setting for the filter level. The filter level is a number from 1 to 99 that corresponds to the level of filtering with 99 being the greatest filtering and 1 the least. To accept the value displayed, press the TARE/ENTER key, otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it.

b - (Break Range)
Press the TARE/ENTER key to show the current setting for the break range. The break range is a number from 1 to 255 that corresponds to the number of division change to break out of the filtering. Press the TARE/ENTER key to keep the displayed value or use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Note that selecting 0 disables this feature.
SETUP AND CALIBRATION, CONT.

$h$ = (High Frequency Filter Value)
Press the TARE/ENTER key to show the current setting for the high frequency filter level. The filter level is a number from 0 to 99 that corresponds to the level of filtering with 99 being the greatest filtering and 1 the least.

Press the TARE/ENTER key to keep the displayed value or use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Note that selecting 0 disables this feature.

$Sr$ = (Sample Rate)
Press the TARE/ENTER key to show the current setting for the sample rate. The value displayed is the sample rate in samples per second. Press the TARE/ENTER key to save the displayed value or use the ASTERISK/UP ARROW key to toggle to a new value (1 to 100) and then press the TARE/ENTER key to save it.

$UnS$ = (Motion Range)
Press the TARE/ENTER key to view the current setting for the range of motion detection. If the displayed value is acceptable, press the TARE/ENTER key to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new range (the number of divisions of change permitted before indicating unstable) and then press the TARE/ENTER key to save the new setting. Allowable range values are: 0 through 99 divisions.

$SC$ = (Stable Count)
Press the TARE/ENTER key to view the current setting for the number of consecutive stable weight readings before indicating stable weight. This helps filter weight readings for stability when trying to capture stable weight. If the displayed value is acceptable, press the TARE/ENTER key to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new value and press the TARE/ENTER key to save the new setting. Allowable values for the stable count are: 3 through 255.
FILTER SETTING RECOMMENDATIONS

Non Critical Sample Rate
If the sample rate is not critical, as in static weighing, set $dFLt$ to “0” (no filtering), $dFLt$ “1” ($F = 6$, $b = 12$, $5r = 2$/Sec), or $dFLt$ “2” ($F = 6$, $b = 8$, $5r = 1$/Sec).

Critical Sample Rate
If the sample rate is critical, as in a filling operation, use the Custom Filtering (set $dFLt$ to “3”).

1. $5r$ : SAMPLE RATE (1 to 50 samples/second) determination:
   Set the sample rate as close as possible to produce a display graduation change for every graduation of material added to the scale.

   \[
   \text{Material Flow Rate (lbs/second)} = \frac{\text{Resolution}}{	ext{Sample Rate}}
   \]

   EXAMPLE: $\frac{100\text{lbs/sec}}{10\text{lbs}} = 10\text{s/s} = 5r$

2. $b$ : BREAK RANGE (1 to 255 graduations) determination:
   Turn the filtering off by setting the $dFLt$ setting to “0”. Operate the system as it will be normally used and, by observation, determine the number of grads of instability that needs to be filtered out. Set the break range ($b$) to that value.

   \[
   \text{Weight Change} = \frac{\text{Graduation Value}}{b}
   \]

   EXAMPLE: 20,000 x 10lb capacity scale with 800lb variation in the weight display.

   \[
   \frac{800}{10} = b = 80
   \]

3. $F$ : FILTER SETTING (1 to 99) determination: Set to desired results.

4. If stability is unacceptable with any setting of $F$, reduce the sample rate and/or increase the break range, $b$ setting for increased filtering.
SETUP AND CALIBRATION, CONT.

CAL (CAL?) - Calibration
With \( CAL (CAL?) \) displayed, press the TARE/ENTER key. The display will change to show the current setting \( \text{no} \). If calibration is desired, press the ASTERISK/UP ARROW key (display will change to \( \text{YES} \)) and then the TARE/ENTER key to continue to the \( CAL \) \( \text{iz} \) setting, otherwise press the TARE/ENTER key to advance to the \( SET \) menu.

CALIBRATION MODES
The 200 indicator has five modes that can be used to perform calibration. Three of the modes require a test load or test weights, one requires the scale to be empty (and at zero) and the last uses the calibration “C” numbers from a previous calibration. The modes are as follows:

1. Dual-Point with Zero (First Zero)
   This is a standard calibration method requiring one weight, an empty scale and has one conversion factor. This method uses two calibration points \( CAL \) \( \text{iz} \) and \( CAL \) \( \text{2z} \) to establish a zero (no load) calibration value and to span the indicator. The two points correspond to zero weight and the test load or test weight and can be applied in any order. This method should be used for first-time calibration and complete recalibration.

2. Dual-Point without Zero (False Zero)
   This calibration method requires one test weight and establishes a new conversion factor only. It is used to establish a false (temporary zero) zero without affecting the zero calibration value stored during the last calibration. This is particularly useful in tank weighing applications, where it may be impractical or impossible to completely empty the tank. This method uses two calibration points, \( CAL \) \( \text{iz} \) and \( CAL \) \( \text{2z} \). The value of the test weight is entered when \( CAL \) \( \text{iz} \) is displayed and the NET/GROSS key is pressed when \( CAL \) \( \text{2z} \) is displayed.

3. Single-Point for Span Only (Last Zero)
   This calibration method requires one test weight and establishes a new conversion factor (span) without affecting the zero calibration value stored during the last calibration. This minimizes placing and removing test weights and is especially useful when checking high capacity scales. This method uses two calibration points, \( CAL \) \( \text{iz} \) and \( CAL \) \( \text{2z} \). The value of the test weight is entered when \( CAL \) \( \text{iz} \) is displayed and the ZERO key is pressed when \( CAL \) \( \text{2z} \) is displayed.

4. Single-Point for Zero Only (Only Zero)
   This calibration method requires no test weight, an empty scale and establishes a new zero without affecting the conversion factor (span). This is useful to regain the full range of zero limit when the dead load of the scale has changed. This would occur for example, if a guard rail has been added to the scale platform. This method uses two calibration points, \( CAL \) \( \text{iz} \) and \( CAL \) \( \text{2z} \). The TARE/ENTER key is pressed when \( CAL \) \( \text{iz} \) is displayed and the ZERO key is pressed when \( CAL \) \( \text{2z} \) is displayed.

5. Calibration “C” Numbers
   The calibration “C” numbers (\( C1 \), \( C2 \), \( C3 \) and \( C4 \)) are displayed only during the Test mode operation and are shown at the end of the test. Each number is displayed for approximately 4 seconds, allowing you to record them. These numbers correspond to the calibration setting of the indicator. The numbers may be up to three digits in length. By recording these numbers you will be able to return the indicator to its present calibration settings without using test weights simply by entering the “C” numbers. Refer to the Calibration “C” Number section of this manual for instructions on viewing the “C” numbers.
SETUP AND CALIBRATION, CONT.

Dual-Point with Zero (First Zero) Calibration

IMPORTANT! The functions of numeric keys are replaced by using the UNITS/LEFT ARROW and the ASTERISK/UP ARROW keys. The cursor location is identified by the blinking character and can be advanced to the left to the next position by pressing the UNITS/LEFT ARROW key. Pressing the ASTERISK/UP ARROW key will change the blinking character to the next value.

CAL1= – First Calibration Weight
The display will show CAL1=0. This is the first of two calibration weights. This weight could be ZERO (NO LOAD) or the TEST WEIGHTS / TEST LOAD.

- If the first calibration weight is to be ZERO (NO LOAD), press the TARE/ENTER key.
- If the first calibration weight is to be the TEST WEIGHTS / TEST LOAD, use the UNITS/LEFT ARROW and ASTERISK/UP ARROW keys to input the value of the calibrated test weights. NOTE: When entering values for CAL1, the digits start displaying on the right side of the display and proceed to the left. When large values are used (more than 3 digits), the CAL1 prompt will automatically scroll off the left side of the display to show the additional digits on the right as they are entered.
- Place the weights on the scale platform, then press the TARE/ENTER key.
- Starting at the left and advancing right, a series of dashes will appear on the display. The dashes will stay on the display momentarily, then disappear, after which the display will show: CAL2=.

CAL2= – Second Calibration Weight
The display will show CAL2=0. This is the second of two calibration weights. This weight could be ZERO (NO LOAD) or the TEST WEIGHTS / TEST LOAD.

- If the second calibration weight is to be ZERO (NO LOAD), press the TARE/ENTER key.
- If the second calibration weight is to be the TEST WEIGHTS / TEST LOAD, use the UNITS/LEFT ARROW and ASTERISK/UP ARROW keys to input the value of the calibrated test weights. NOTE: When entering values for CAL2, the digits start displaying on the right side of the display and proceed to the left. When large values are used (more than 3 digits), the CAL2 prompt will automatically scroll off the left side of the display to show the additional digits on the right as they are entered.
- Place the weights on the scale platform, then press the TARE/ENTER key.
- Starting at the left and advancing right, a series of dashes will appear on the display. The dashes will stay on the display momentarily, then disappear, after which the display will show: CAL3=.

CAL3= – Last Calibration Weight
The display will show CAL3=0. This weight is not used. Press the TARE/ENTER key to skip CAL3 and advance to SIO.
SETUP AND CALIBRATION, CONT.

Dual-Point without Zero (False Zero) Calibration

IMPORTANT! The functions of numeric keys are replaced by using the UNITS/LEFT ARROW and the ASTERISK/UP ARROW keys. The cursor location is identified by the blinking character and can be advanced to the left to the next position by pressing the UNITS/LEFT ARROW key. Pressing the ASTERISK/UP ARROW key will change the blinking character to the next value.

**CAL1=** – First Calibration Weight
The display will show **CAL1=0**. This is the first of two calibration steps. This weight is the TEST WEIGHTS / TEST LOAD.

- Place the weights on the scale platform.
- Using the UNITS/LEFT ARROW and ASTERISK/UP ARROW keys, input the value of the calibrated test weights / test load, then press the TARE/ENTER key. **NOTE:** When entering values for **CAL1=**, the digits start displaying on the right side of the display and proceed to the left. When large values are used (more than 3 digits), the **CAL1=** prompt will automatically scroll off the left side of the display to show the additional digits on the right as they are entered.
- Starting at the left and advancing right, a series of dashes will appear on the display. The dashes will stay on the display momentarily, then disappear, after which the display will show: **CAL1=**.

**CAL2=** – Second Calibration Weight
The display will show **CAL2=0**. This is the second of two calibration steps.

- Remove the weights on the scale platform, and then press the NET/GROSS key.
- Starting at the left and advancing right, a series of dashes will appear on the display. The dashes will stay on the display momentarily, then disappear, after which the display will show: **Sio?**.

Single-Point for Span Only (Last Zero) Calibration

**CAL1=** – First Calibration Weight
The display will show **CAL1=0**. This is the first of two calibration steps. This weight is the TEST WEIGHTS / TEST LOAD.

- Zero the scale, and then place the weights on the scale platform.
- Using the UNITS/LEFT ARROW and ASTERISK/UP ARROW keys, input the value of the calibrated test weights / test load, then press the TARE/ENTER key. **NOTE:** When entering values for **CAL1=**, the digits start displaying on the right side of the display and proceed to the left. When large values are used (more than 3 digits), the **CAL1=** prompt will automatically scroll off the left side of the display to show the additional digits on the right as they are entered.
- Starting at the left and advancing right, a series of dashes will appear on the display. The dashes will stay on the display momentarily, then disappear, after which the display will show: **CAL1=**.

**CAL2=** – Second Calibration Weight
The display will show **CAL2=0**. This is the second of two calibration steps.

- Remove the weights on the scale platform, and then press the ZERO key.
- The display will advance to **Sio?**.
SETUP AND CALIBRATION, CONT.

Single-Point for Zero Only (Only Zero) Calibration

**IMPORTANT!** The functions of numeric keys are replaced by using the UNITS/LEFT ARROW and the ASTERISK/UP ARROW keys. The cursor location is identified by the blinking character and can be advanced to the left to the next position by pressing the UNITS/LEFT ARROW key. Pressing the ASTERISK/UP ARROW key will change the blinking character to the next value.

\textbf{CAL1} – First Calibration Weight

The display will show \texttt{CAL1=0}. This is the first of two calibration steps.

- Insure the scale is empty.
- Press the TARE/ENTER key.
- Starting at the left and advancing right, a series of dashes will appear on the display. The dashes will stay on the display momentarily, then disappear, after which the display will show: \texttt{CAL2=}.

\textbf{CAL2} – Second Calibration Weight

The display will show \texttt{CAL2=0}. This is the second of two calibration steps.

- Press the ZERO key.
- The display will advance to \texttt{Sio?}.

**Calibration “C” Numbers**

1. With \texttt{CAL1} displayed, press the UNIT key.
2. At the \texttt{C1} prompt, press the TARE/ENTER key to show the current value of the \texttt{C1} number.
3. If the \texttt{C1} number displayed is acceptable, press the TARE/ENTER key again to save it.
4. Otherwise, use the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys to enter a new \texttt{C1} number, then press the TARE/ENTER key.
5. Repeat steps 2 through 4 for \texttt{C2, C3, and C4}.

**NOTE:** If any components have been changed that affect calibration and/or your scale is used in a commercial application and must be “Legal for Trade” you cannot use the “C” numbers to re-calibrate.
SETUP AND CALIBRATION, CONT.

**Setup Guardian Scale**

If a GUARDIAN scale is connected to the indicator, at the SST? prompt press the ASTERISK/UP ARROW key to select YES.

The tLo= prompt will be displayed. This is the low end of the range of weight that requires adjusting. For example, if after performing linearization testing, the displayed weight is 5 lbs low between 10,000 lbs and 15,000 lbs, the value for the tweak low weight is 10000.

Using the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys, input the tweak low weight value and then press the TARE/ENTER key.

The tHi= prompt will be displayed. This is the high end of the range of weight that requires adjusting. Using the example above, the value for the tweak high weight is 15000.

Using the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys, input the tweak high weight value and then press the TARE/ENTER key.

The tUAL= prompt will be displayed. This is the amount of weight that needs to be added (or subtracted) from the range of weight to bring the displayed weight into tolerance. Again, using the example above, the Tweak Weight value would be 5.

Using the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys, input the tweak weight value (pressing the NET key will change the sign) and then press the TARE/ENTER key to save it and advance to the SST? menu.
SETUP AND CALIBRATION, CONT.

$io (Sio?) - Serial Input/Output
With $io (Sio?) displayed, press the TARE/ENTER key. The display will change to show the current setting $io. To skip configuring the $io (serial input/output) and proceed to the $Pr $nb menu, press the TARE/ENTER key again. To configure the $io, press the ASTERISK/UP ARROW key (display will change to $y$) and then press the TARE/ENTER key. After pressing the TARE/ENTER key, the display will change to $bUd$.

$bUd$ (Serial Port Baud Rate)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new baud rate for the serial ports and then press the TARE/ENTER key to save it. Allowable values are:

- 12 = 1200 Baud
- 24 = 2400 Baud
- 48 = 4800 Baud
- 96 = 9600 Baud
- 19 = 19.2k Baud
- 38 = 38.4k Baud
- 76 = 76.8k Baud

$Pr$ (Serial Port Parity)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are:

- 0 = NONE (No Parity)
- 1 = Odd Parity
- 2 = Even Parity

$b$ (Serial Port Data Bits)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 7 or 8.

$St$ (Serial Port Stop Bits)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 1 or 2.

$Cont$ (Continuous Output Serial Port 1)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it.

- $Cont$ = $YES$ (Continuous Output)
- $Cont$ = $NO$ (No Continuous Output)

If $Cont$ = $YES$ (Continuous Output) is selected, an additional prompt, $y$ will be displayed.

If $Cont$ = $NO$ (No Continuous Output) is selected, proceed to the Weight On Demand section.
SETUP AND CALIBRATION, CONT.

**TYPE** = (Continuous Output Format)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are:

**SMA – (Type = 0)**
If SMA is selected, the data will be transmitted in the following format:

\(<lf><s><r><n><m><f><xxxxxx.xxx><uuu><cr>\)

Where:
- **lf** = Line Feed
- **s** = Flags  
  - Z = center of Zero, O = Overcap, E = zero Error, e = weight not currently being displayed
- **r** = Range  
  - 1, 2, 3, ...
- **n** = Mode  
  - G = Gross, T = Tare, N = Net
- **m** = Motion  
  - M = Motion, " " (blank) = no motion
- **f** = Custom  
  - Custom flag
- **xxxxxx.xxx** = Weight  
  - Six digits with decimal point
- **uuu** = Units  
  - ton, lb, l/o, oz, t, kg, g
- **cr** = Carriage Return  
  - (hex 0D)

**SB-400 – (Type = 1)**
If SB-400 or Computer is selected, the data will be transmitted in the following format:

\(<s><xxxxxxx><d><uu><m><cc><cr>\)

Where:
- **s** = Sign  
  - "+" = negative, " " (blank) = positive
- **xxxxxxx** = Weight  
  - Six digits
- **d** = Decimal point  
  - Added to string if enabled in setup
- **uu** = Units  
  - tn, lb, l/o, oz, t, kg, g
- **m** = Mode  
  - G = Gross, N = Net
- **cc** = Weight Status  
  - OC = overcap  
  - CZ = center of zero  
  - MO = motion  
  - ee = weight not currently being displayed
- **cr** = Carriage Return  
  - (hex 0D)

*The SB-80, SB-300 (multiple displays not supported) and WinVRS use the SB-400 format.*
SETUP AND CALIBRATION, CONT.

SB-200 – (Type = 2)
If SB-200 is selected, the data will be transmitted in the following format:

\[ \text{<cr}><s><xxxxxx><d><c><uu><m> ETX} \]

Where:

- \text{cr} = \text{Carriage Return} \quad \text{(hex 0D)}
- \text{s} = \text{Sign} \quad \text{"." = negative, " " (blank) = positive}
- \text{xxxxxx.xxx} = \text{Weight} \quad \text{(with leading zeros)}
- \text{d} = \text{Decimal point} \quad \text{Embedded into weight (after weight dpp=0)}
- \text{c} = \text{status} \quad \text{m = motion}
- \text{o = overcap}
- \text{e = weight not currently being displayed}

- \text{uu} = \text{Units} \quad \text{tn, lb, l/o, oz, t, kg, g}
- \text{m} = \text{Mode} \quad \text{G = Gross, N = Net}
- \text{ETX = End of TeXt} \quad \text{(hex 03) MUST terminate ALL serial commands}

Rice Lake IQ355 – (Type = 3)
If Rice Lake IQ355 is selected, the data will be transmitted in the following format:

\[ \text{<stx><s>xxxxxxx<u><m><s><cr><lf>} \]

AnDFV – (Type = 4)
If AnDFV is selected, the data will be transmitted in the following format:

\[ \text{<hdr1>,xxxxx<uu><cr><lf>} \]

WI110 – (Type = 5)
If WI110 is selected, the data will be transmitted in the following format:

\[ \text{<m><sp><s>xxxxx<sp><uu><cr><lf>} \]

Number Only – (Type = 6)
If number only is selected, the data will be transmitted in the following format:

\[ \text{xxxxxx<cr><lf>} \]

Toledo Short – (Type = 7)
If Toledo Short is selected, the data will be transmitted in the following format:

\[ \text{<stx><swa><swb><swc>xxxxxx<cr><sum>} \]

Toledo Long – (Type=7)
If Toledo Long is selected, the data will be transmitted in the following format:

\[ \text{<stx><swa><swb><swc>xxxxxxyyyyy<cr><sum>} \]

Where:

- \text{xxxxxx = Weight} \quad \text{(leading zeros suppressed)}
- \text{yyyyyy = Tare Weight} \quad \text{(leading zeros suppressed)}
SETUP AND CALIBRATION, CONT.

SB500 (with Traffic Light) – (Type = 8)
If SB500 (with Traffic Light) is selected, the data will be transmitted in the following format:

%NDDDDDDDDDT<CR>

Where:

N = Panel number for a daisy chain configuration
D = Byte of data to display at respective location on the scoreboard
T = Control character for the traffic light. Valid characters for T are:
   G = Turn on Green light
   R = Turn on Red light
   " (space) = no lights on
<CR> = Carriage Return

Ranger 5000 Format A – (Type = 9)
In setup, after selecting type 9 for the Ranger 5000 Format A:

At the StArtb prompt, enter the decimal value for the start character.
Valid entry is 0 to 126.

At the Endb 1 prompt, enter the decimal value for the first end character.
Valid entry is 0 to 126.

At the Endb 2 prompt, enter the decimal value for the second end character.
Valid entry is 0 to 126.

If the above items are ‘0’ then the character will not be included in the data stream.

If Ranger 5000 Format A is selected, the data will be transmitted in the following format:

<StAr tb>Sign WeightA(7) Status

Where:

Sign = The sign of the weight (‘ ‘ for positive, ‘-‘ for negative)
WeightA = A seven character string containing the current weight including the decimal point. If there is no decimal point, then the first character is a space. Leading zero blanking applies.
Status = Provides information on the weight reading. The characters G/N/U/O/M/E represent Gross/Net/Underload/Overload/Motion/Error respectively.
SETUP AND CALIBRATION, CONT.

GEDGE 1650 FORMAT 4 – (Type = 10)
In setup, after selecting type 10 for the GEDGE 1650 Format 4:

At the $dA$t $E$ prompt, enter the format for the date and time (0-4).

At the $e r t C$ prompt, enter the decimal value for the start character (0-126).

At the $e b L o C$ prompt, enter the decimal value for the end block character or data separator (0-126).

At the $d b U b$ prompt, enter the decimal value for the device number (0-99).

Format
$<$Bg$><$DT$><$BD$><$No$><$BD$><$W1$><$BD$><$D2$><$D3$><$D4$><$D5$><$D6$><$D7$><$BD$><$En$>

Where:

$Bg$ is the starting character, if 0 then it is not transmitted.
$DT$ is the Date and Time the following BD character is output only if the date/time is output.
$BD$ Block division character.
$D2$ Displayed weight identity. $G$=gross, $N$=net
$D3$ $M$ scale is in motion, $S$ scale is stable.
$D4$ $I$nscale ($0>=weight<=capacity$) $O$vercap $U$=below zero
$D5$ $Z$=Center-of-Zero, otherwise ASCII space
$D6$ $E$=Tare not equal to 0, otherwise ASCII space
$D7$ Always an ASCII space
$En$ End of transmission character
$No$ Device Number 01 thru 99. If set to 0 above, then nothing is output.
$W1$ Displayed weight.

Weight On Demand
If continuous output has not been selected for Serial Port 1 (Cont1=NO), the 200 indicator will respond to a weight request (ENQ).

The host device (computer) sends:

ENQ - (hex 05)

The 200 will respond:

$<$s$><xxxxxx$><$d$><$uu$><$m$><$cc$><$cr$>

Where:

$s$ = Sign

$xxxxxx.xxx$ = Six digits

$u$ = Decimal point

$uu$ = Units

$m$ = Mode

$cc$ = Weight Status

$cr$ = Carriage Return

NOTE: The Weight On Demand function is not available for Serial Port 2.
SETUP AND CALIBRATION, CONT.

Cont2= (Continuous Output Serial Port 2)
Press the ENTER key to show the current value. If the setting displayed is acceptable, press the ENTER key again to save it. Otherwise, using the arrow keys, select a new setting then press the ENTER key to save it.

Cont2= YES  No
Continuous Output  No Continuous Output

If Cont2= YES (Continuous Output) is selected, an additional prompt, TYPE= will be displayed.

TYPE= (Continuous Output Format)
Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are:

0 = SMA  1 = SB-400  2 = SB-200
3 = Rice Lake IQ355  4 = AnDFV  5 = WI110
6 = Number Only  7 = Toledo Long/Short  8 = SB500 with Traffic Light
9 = Ranger 5000 Format A  10 = GEDGE 1650 Format 4

NOTE: See Continuous Output Serial Port 1, TYPE= for description of output formats.

THRS= (Threshold Weight)
If any of the Serial Ports have been configured for continuous SB-500 with Traffic Light output, this prompt will be displayed.

Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys to enter a new setting for the threshold weight and then press the TARE/ENTER key to save it.

The threshold weight is used to automatically toggle between the Red and Green lights.

- When the scale gross weight is less than the threshold weight, the Green light will be on, otherwise the Red light will turn on and stay on until the weight goes below the threshold weight or a ticket is printed.

- When a ticket is printed, the Green light will turn on and stay on until the scale gross weight goes below and back above the threshold weight and then the Red light will turn on.

**NOTE:** If you enter a zero (0) for the threshold weight (THRS=0), the traffic light feature will be disabled (turned off).
SETUP AND CALIBRATION, CONT.

\( Pr \ int \) (\( Pr \ int \)) – Print Tab Settings

With \( Pr \ int \) (\( Pr \ int \)) displayed, press the TARE/ENTER key. The display will change to show the current setting \( no \). To skip configuring the Print Tab Settings and proceed to the \( FSPn? \) menu, press the TARE/ENTER key again. To configure the Print Tab Settings, press the \( ASTERISK/UP \) ARROW key (display will change to \( yes \)) then the TARE/ENTER key. After pressing the TARE/ENTER key the display will change to \( Port\).  

The general format for the input is \( A = YY.XX \) where \( A \) is the character identifying the data printed, \( YY \) is the number of lines down and \( XX \) is the number of spaces to the right.

**NOTE:** Enter 00 in either the \( YY \) or \( XX \) location to disable the data from printing.

\( Port \) (Select Port for Printer)

Press the TARE/ENTER key to show the current value. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \( ASTERISK/UP \) ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 1 or 2.

**NOTE:** Although either port can be used for the printer port, it is recommended to use the bi-directional port 1 with a bi-directional cable.

\( id \) (ID Prompt Print Location)

Press the TARE/ENTER key to show the current setting for the location of ID prompt printing. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \( ASTERISK/UP \) ARROW and \( UNITS/LEFT \) ARROW keys to input a new location and then press the TARE/ENTER key to save it.

\( \ell \n\ell \ n \) (Consecutive Number Print Location)

Press the TARE/ENTER key to show the current setting for the location of consecutive number printing. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \( ASTERISK/UP \) ARROW and \( UNITS/LEFT \) ARROW keys to input a new location and then press the TARE/ENTER key to save it.

\( G r o s s \) (Gross Weight Print Location)

Press the TARE/ENTER key to show the current setting for the location of Gross weight printing. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \( ASTERISK/UP \) ARROW and \( UNITS/LEFT \) ARROW keys to input a new location and then press the TARE/ENTER key to save it.

\( t A r E \) (Tare Weight Print Location)

Press the TARE/ENTER key to show the current setting for the location of Tare weight printing. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \( ASTERISK/UP \) ARROW and \( UNITS/LEFT \) ARROW keys to input a new location and then press the TARE/ENTER key to save it.

\( n Et \) (Net Weight Print Location)

Press the TARE/ENTER key to show the current setting for the location of Net weight printing. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the \( ASTERISK/UP \) ARROW and \( UNITS/LEFT \) ARROW keys to input a new location and then press the TARE/ENTER key to save it.
SETUP AND CALIBRATION, CONT.

G ACC= (Gross Weight Accumulator Print Location)
Press the TARE/ENTER key to show the current setting for the location of Gross weight accumulator printing. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys to input a new location and then press the TARE/ENTER key to save it.

n ACC= (Net Weight Accumulator Print Location)
Press the TARE/ENTER key to show the current setting for the location of Net weight accumulator printing. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys to input a new location and then press the TARE/ENTER key to save it.

CrLF= (Carriage Return Line Feed) - Data Format Termination
Data transmitted from the serial I/O port can be terminated with a single carriage return and either no line feed or a single line feed command. Press the TARE/ENTER key to view the current setting. A YES on the display means the data will be terminated with a carriage return AND a line feed while a NO on the display means the data will be terminated with a single carriage return only.

If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it.

EoP= (End-Of-Print Line Feeds)
At the end of a data transmission to a printer, the indicator can transmit a pre-selected number of line feed commands to space the paper in the printer to the desired position for withdrawal or for the next print.

Press the TARE/ENTER key to view the current setting. If the displayed value is acceptable, press the TARE/ENTER key to save it. Otherwise, use the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys to input the number of End-Of-Print linefeeds and then press the TARE/ENTER key to save it. Allowable values are: 0 through 99.
SETUP AND CALIBRATION, CONT.

**F SPAn (FSPAn?) - Fine Span Adjustment**

NOTE: The **F SPAn** and **Hi rES** modes require a load of 10% of Capacity be on the scale before adjustments can be made.

With the **F SPAn?** prompt displayed after pressing the **TARE/ENTER** key at the last Print prompt:

With **F SPAn?** displayed, press the **TARE/ENTER** key. The display will change to show the current setting off. To skip the Fine Span Adjustment and return to the **SETUP** menu, press the **TARE/ENTER** key again. To perform the Fine Span Adjustment, place a calibrated test weight on the scale and press the **ASTERISK/UP ARROW** key (display will change to **YES**) and then the **TARE/ENTER** key.

After pressing the **TARE/ENTER** key, the display will change to show the amount of the test weight and the annunciators will alternately flash off and on i.e. (all ON, weighing unit off, then all OFF, weighing unit ON). Press the **ASTERISK/UP ARROW** key to increase the span OR press the **UNITS/LEFT ARROW** key to decrease the span. Press the **ASTERISK** key to return to the previous prompt or press the **TARE/ENTER** key to exit **F SPAn?** and return to the **SETUP** menu.

With the **F SPAn** prompt displayed after pressing the Calibration switch:

With **F SPAn** displayed, place a calibrated test weight on the scale and press the **TARE/ENTER** key. After pressing the **TARE/ENTER** key, the display will change to show the amount of the test weight and the annunciators will alternately flash off and on (all ON, weighing unit off, then all OFF, weighing unit ON). Press the **ASTERISK/UP ARROW** key to increase the span OR press the **UNITS/LEFT ARROW** key to decrease the span. Press the **ASTERISK** key to return to the previous prompt or press the **TARE/ENTER** key to exit **F SPAn** and return to the **SETUP** menu.

**Hi rES - Display High Resolution Weight**

With **Hi rES** on the display, pressing the **TARE/ENTER** key will show the active weight in "high resolution" mode (in 1/10 interval). Press the **PRINT** key to print the weight (followed by the text TEST) via the selected printer output port enabled during setup and calibration. Press the **TARE/ENTER** key to return to the **Hi rES** prompt. To exit the **Hi rES** mode, press the calibration switch or cycle power (press the **ON/OFF** key twice).

**LoCoUt - Key Lock Out Function**

With **LoCoUt** on the display, pressing any key will display **LoCd** (locked) or **UnLoCd** (unlocked) for the current key state. Pressing a locked key during normal operation will result in a 1/2 second display **LoCd** and the key will be ignored. To exit the **LoCoUt** function, press the calibration switch or cycle power (press the **ON/OFF** key twice).

NOTE: The menu selections **Hi rES** and **LoCoUt** can only be selected using the calibration switch.

**Opt ion - Option Card Configuration**

This prompt will ONLY be displayed when a 2XX Option Card is installed in the indicator. Refer to the manual for the 2XX option card installed for setup instructions.
SETUP REVIEW

The Model 200 Weight Indicator allows several operational parameters to be reviewed and changed without breaking the calibration seal. These operational parameters are:

- Power Up Zero Reset Enable/Disable
- Sleep Mode Feature Enable/Disable
- Auto Shutoff Feature Enable/Disable
- Clear Tare Feature Enable/Disable

Serial Input / Output Configuration
- Baud Rate
- Parity
- Number of Data Bits
- Number of Stop Bits
- Continuous Output Port 1
  - Continuous Output Format
    - Type
- Continuous Output Port 2
  - Continuous Output Format
    - Type

Print Tab Settings
- Printer Port Selection
- Gross Weight
- Tare Weight
- Net Weight
- Gross Weight Accumulator
- Net Weight Accumulator
- CRLF Data Format Termination
- End-Of-Print Line Feeds

To enable the Setup Review feature, with the indicator ON:

1. Press the **ASTERISK/UP ARROW** key. The indicator will respond by showing the **FUnCt** (Function) prompt and alternately flashing off and on (all ON, weighing unit off, then all OFF, weighing unit ON) the annunciators.

2. Press the **ZERO/REVIEW** key. The display will change to the prompt for the selection of power-up zeroing (**PUO**).

3. Using the same procedure as described in the Setup and Calibration section of this manual make the required changes.

4. Press the **ASTERISK/UP ARROW** key to return to the previous prompt.

5. To exit Setup Review, press the **ASTERISK/UP ARROW** key to step through the remaining prompts *OR* at anytime, cycle the power (press the **ON/OFF** key twice).
CALIBRATION “C” NUMBERS

The “C” numbers are displayed only during the Test mode operation by pressing the ASTERISK/UP ARROW key then the UNITS/TEST key. The "C" numbers are shown at the end of the test operation and each number is displayed for approximately 4 seconds, allowing you to record them. Each number may be up to three (3) digits in length. By recording these numbers you will be able to return the indicator to its present calibration settings without using test weights simply by entering the “C” numbers.

1. With CAL1= displayed, press the UNIT key.
2. At the C1= prompt, press the TARE/ENTER key to show the current value of the C1 number.
3. If the C1= number displayed is acceptable, press the TARE/ENTER key again to save it.
4. Otherwise, use the ASTERISK/UP ARROW and UNITS/LEFT ARROW keys to enter a new C1= number, then press the TARE/ENTER key.
5. Repeat steps 2 through 4 for C2=, C3= and C4=.

NOTE: If any components have been changed that affect calibration and/or your scale is used in a commercial application and must be "Legal for Trade" you cannot use the “C” numbers to re-calibrate.
ACCUMULATORS

To view the NET accumulator:
1. Press the ASTERISK/UP ARROW key then the NET/GROSS key.
2. Press the ASTERISK/UP ARROW key to return to normal operation.

To print the NET accumulator:
1. Press the ASTERISK/UP ARROW key, the NET/GROSS key, then the PRINT key
2. The indicator will return to normal operation when printing has been completed.

To clear (zero) the NET accumulator:
1. Press the ASTERISK/UP ARROW key, the NET/GROSS key, then the ZERO key
2. Press the ASTERISK/UP ARROW key to return to normal operation.

To view the Gross accumulator:
1. Press the ASTERISK/UP ARROW key then the NET/GROSS key twice.
2. Press the ASTERISK/UP ARROW key to return to normal operation.

To print the Gross accumulator:
1. Press the ASTERISK/UP ARROW key, the NET/GROSS key twice, then the PRINT key
2. The indicator will return to normal operation when printing has been completed.

To clear (zero) the Gross accumulator:
1. Press the ASTERISK/UP ARROW key, the NET/GROSS key twice, then the ZERO key
2. Press the ASTERISK/UP ARROW key to return to normal operation.
TROUBLESHOOTING

Error Codes
The Model 200 Weight Indicator is equipped with software that indicates when an error in the operation takes place. The following lists the error codes displayed by the indicator along with their meaning. Should you encounter an error code, please refer to this list for the cause.

CALbtn (Calibration button)
CALbtn will be displayed (until the condition changes), on power-up if the calibration switch is pressed in by the operator or the switch is defective.

CORRECTIVE ACTION: Release the switch. Replace calibration switch assembly. Consult your scale service provider.

Conf (Configuration)
E2PROM checksum failure. Indicates improper stored calibration data, calibration is necessary.

CORRECTIVE ACTION: Recalibrate with calibrated test weight.

Error (Error)
An invalid keypad entry was attempted:

A. PRINT key pressed with a negative weight.
B. TARE/ENTER key pressed to enter a push button tare value of a negative value.
C. TARE/ENTER key pressed to enter a tare weight value that exceeds the scale capacity.
D. TARE/ENTER key pressed to enter a tare weight value that is inconsistent with the scale division value (i.e. attempt to enter a tare of 123 with scale divisions of 5).
E. ZERO key pressed when the gross weight is outside the scale zero weight range.
F. UNITS/TEST key pressed to change to kg when the kg tare weight value exceeds 4 digits in length.

CORRECTIVE ACTION: Determine which of the reasons for the error display is applicable and take the appropriate corrective action.

ErrAh (Error Analog high)
1. The load cell input is above the range of the indicator.

CORRECTIVE ACTION: Check for improper load cell wiring, excessive load, and for output of 1 to 40mV.

2. Load cell or circuit failure.

CORRECTIVE ACTION: Consult your scale service provider.

ErrAL (Error Analog Low)
1. The load cell input is below the range of the indicator.

CORRECTIVE ACTION: Check for improper load cell wiring and for output of 1 to 40mV.

2. Load cell or circuit failure.

CORRECTIVE ACTION: Consult your scale service provider.
TROUBLESHOOTING, CONT.

Error Codes, Cont.

Err 1 (Error 1)
A program checksum mismatch has been detected.

CORRECTIVE ACTION: Consult your scale service provider.

Err 3 (Error 3)
Internal RAM failure.

CORRECTIVE ACTION: Consult your scale service provider.

HuH? (HuH?)
UNITS key pressed in an attempt to perform a unit conversion that is not allowed.

CORRECTIVE ACTION: Determine the reason for the error display and take the appropriate corrective action.

noArE (no tarE)
NET key pressed with no stored tare weight value.

CORRECTIVE ACTION: Determine the reason for the error display and take the appropriate corrective action.

oCap (over Capacity)
The load on the scale exceeds the scale capacity plus nine (9) divisions.

CORRECTIVE ACTION: Remove the over capacity load from the scale platform. May indicate an incorrect calibration.

-oF- (overflow)
The indicator is attempting to display a positive number greater than six (6) digits in length or a negative number of more than five (5) digits.

CORRECTIVE ACTION: Return to Gross Weight mode and review Tare value. May indicate an incorrect calibration.

too b. (too big)
UNITS key pressed in an attempt to perform a unit conversion where the interval would have been greater than 50.

CORRECTIVE ACTION: Determine the reason for the error display and take the appropriate corrective action.

UnStb (Unstable)
Motion is present when trying to perform a print function.

CORRECTIVE ACTION: Wait for a stable weight display (STABLE annunciator on) before performing any of this operation.
Before You Call For Service

The Model 200 Weight Indicator has been designed to provide you with years of trouble-free operation. In spite of this, troubles sometimes happen. Before calling for service assistance you should make some initial checks to verify that a problem does exist. The following describes several types of symptoms along with suggested remedies.

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>POSSIBLE SOLUTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display does not turn on</td>
<td>AC operation:</td>
</tr>
<tr>
<td></td>
<td>Is the AC power cord fully inserted into the wall receptacle?</td>
</tr>
<tr>
<td></td>
<td>Check wall receptacle for proper AC power. Try another</td>
</tr>
<tr>
<td></td>
<td>electrical appliance in the same receptacle, does it work?</td>
</tr>
<tr>
<td></td>
<td>Check the circuit breaker. Has there been power failure?</td>
</tr>
<tr>
<td>Incorrect weight displayed</td>

TROUBLESHOOTING, CONT.

Diagnostic Test Mode

To Start Diagnostic Test Mode
1. Remove calibration access screw.
2. Press ON/OFF key to turn indicator ON.
3. Insert a small screwdriver or other tool into the access hole and press the CAL switch.
4. Display will change to Setup.
5. Press UNITS/TEST key.
6. Display will change to Test.
7. Press TARE/ENTER key to show current test function value (which will be 0, test feature off).
8. Using the UNITS/LEFT ARROW and ASTERISK/UP ARROW keys, enter test function value and then press ENTER key.
   - 4 = raw A/D readings
   - 16 = display milliVolts
9. Display will change to Setup.
10. Press ASTERISK/UP ARROW key to begin test.
11. Display will change to show test data.

To Change Diagnostic Test Mode
1. With indicator displaying test data, insert a small screwdriver or other tool into the access hole and press the CAL switch.
2. Display will change to Setup.
3. Press UNITS/TEST key.
4. Display will change to Test.
5. Press TARE/ENTER key to show current test function value.
6. Using the UNITS/LEFT ARROW and ASTERISK/UP ARROW keys, enter test function value and then press ENTER key.
   - 4 = raw A/D readings
   - 16 = display milliVolts
7. Display will change to Setup.
8. Press ASTERISK/UP ARROW key to begin test.
9. Display will change to show test data.

To Stop Diagnostic Test Mode
1. With indicator displaying test data, insert a small screwdriver or other tool into the access hole and press the CAL switch.
2. Display will change to Setup.
3. Press UNITS/TEST key.
4. Display will change to Test.
5. Press TARE/ENTER key to show current test function value.
6. Using the UNITS/LEFT ARROW and ASTERISK/UP ARROW keys, enter a 0 for the test function value (0 = test feature off) and then press TARE/ENTER key.
7. Display will change to Setup.
8. Press ASTERISK/UP ARROW key to stop test and reset indicator.
9. The indicator is now ready for normal operation.

IMPORTANT! Once Diagnostic Test Mode has been enabled, the indicator will power on with TEST on the display. Operator must press TARE/ENTER key to stay in Diagnostic Test Mode or press ASTERISK/UP ARROW key to disable Diagnostic Test Mode.
CALIBRATION SEAL INSTALLATION

If your Model 200 Weight Indicator is used in a commercial application it must be tested and sealed by your local weights and measurements official. The indicator is designed to accept a lead and wire security seal to prevent unauthorized access to the calibration adjustments. Refer to Figure No. 12 for details on the installation of the seal.

Figure No. 12
LOCAL/REMOTE SETUP

If the indicator is to function as a remote indicator, at the $\text{SERSC}\_\text{L}$ (REMOTE INDICATOR SETUP) prompt, press the ASTERISK/UP ARROW key to select YES and then press the TARE/ENTER key.

With $\text{SERSCL}$ set to YES, the $LrP$ (Local/Remote Port) will be displayed to select the serial port for the LOCAL/REMOTE communications.

With the $LrP$ (Local/Remote Port) displayed, press the TARE/ENTER key to show the current setting. If the setting displayed is acceptable, press the TARE/ENTER key again to save it. Otherwise, use the ASTERISK/UP ARROW key to toggle to a new setting and then press the TARE/ENTER key to save it. Allowable values are: 1 for port 1 or 3 for the optional 2xx-RS232 card (if installed).

Any unused RS-232 serial port may be used (see Figure 13 for port 1 interconnect wiring). Note that this is for distances less than 100 feet.

**IMPORTANT!** The selected serial port ($Sio$) for the remote indicator must be configured the same as the serial port used for the local indicator. In addition, the Continuous Output must be set to NO ($\text{Cont=no}$).

Local/Remote 200 RS-232 Wiring

315-WARRANTY-CAR-K
APPLICABLE LIMITATIONS AND REQUIREMENTS

1. This warranty applies only to the original purchaser. The warranty does not apply to equipment that has been tampered with, defaced, damaged, or had repairs or modifications not authorized by Cardinal or has had the serial number altered, defaced or removed.
2. This warranty is not applicable to equipment that has not been grounded in accordance with Cardinal’s recommendations.
3. This equipment must be installed and continuously maintained by an authorized Cardinal dealer.
4. Applies only to components constructed from stainless steel.
5. This warranty does not apply to equipment damaged in transit. Claims for such damage must be made with the responsible freight carrier in accordance with freight carrier regulations.
6. Warranty term begins with date of shipment from Cardinal.
7. Only if device is rated NEMA 4 or better or IP equivalent.
8. Lifetime warranty applies to damages resulting from water, lightning, and voltage transients and applies only to the hydraulic load cell structure itself (does not include pressure transducers, rubber seals, o-rings, and associated wiring).
9. 10 Year prorated warranty on hydraulic load cells.
10. 1 Year warranty for scale structure.
11. PSC models’ warranty coverage applies only to agricultural installations on farms up to 3,000 acres (LSC models not limited in this manner).
12. Load cell kits MUST be installed in accordance with Cardinal Scale instructions. Failure to follow these instructions will void the warranty.

EXCLUSIONS

A.) This warranty does not include replacement of consumable or expendable parts. The warranty does not apply to any item that has been damaged due to unusual wear, abuse, improper line voltage, overloading, theft, fire, water, prolonged storage or exposure while in purchaser’s possession or acts of God unless otherwise stated herein.

B.) This warranty does not apply to peripheral equipment not manufactured by Cardinal. This equipment will normally be covered by the equipment manufacturer’s warranty.

C.) This warranty sets forth the extent of our liability for breach of any warranty or deficiency in connection with the sale or use of our product. Cardinal will not be liable for consequential damages of any nature, including but not limited to loss of profit, delays or expenses, whether based on tort or contract. Cardinal reserves the right to incorporate improvements in material and design without notice and is not obligated to incorporate said improvements in equipment previously manufactured.

D.) This warranty is in lieu of all other warranties expressed or implied including any warranty that extends beyond the description of the product including any warranty of merchantability or fitness for a particular purpose. This warranty covers only those Cardinal products installed in the forty-eight contiguous United States and Canada.

E.) This warranty does not cover paint coatings due to the variety of environmental conditions.

F.) Do not cut load cell cables on load cells returned for credit or warranty replacement. Cutting the cable will void the warranty.

G.) Software is warranted only for performance of the functions listed in the software manual and/or the Cardinal proposal.

H.) The software warranty does not cover hardware. Warranties on hardware are provided from the hardware vendor only.

I.) The software warranty does not cover interfacing issues to non-Cardinal supplied hardware.

J.) The software warranty does not include automatic software upgrades unless purchased separately.
